

The Antebellum South

The pre–Civil War years (1820–1860, or the “antebellum years”) were among the most chaotic in American history—a time of significant changes that took place as the United States came of age. During these years, the nation was transformed from an underdeveloped nation of farmers and frontiersmen into an urbanized economic powerhouse. As the industrialized North and the agricultural South grew further apart, five major trends dominated American economic, social, and political life during this period.

First The Market Revolution—the shift from an agricultural economy to one based on wages and the exchange of goods and services—completely changed the northern and western economy between 1820 and 1860. After Eli Whitney invented the cotton gin and perfected manufacturing with interchangeable parts, the North experienced a manufacturing boom that continued well into the next century. Cyrus McCormick’s mechanical mower-reaper also revolutionized grain production in the West. Internal improvements such as the Erie Canal and the Cumberland Road, combined with new modes of transportation such as the steamboat and railroad, allowed goods and crops to flow easily and cheaply between the agricultural West and manufacturing North. The growth of manufacturing also spawned the wage labor system.

Second, American society urbanized drastically during this era. The United States had been a land comprised almost entirely of farmers, but around 1820, millions of people began to move to the cities. They, along with several million Irish and German immigrants, flooded northern cities to find jobs in the new industrial economy. The advent of the wage labor system played a large role in transforming the social fabric because it gave birth to America’s first middle class. Comprised mostly of white-collar workers and skilled laborers, this growing middle class became the driving force behind a variety of reform movements. Among these were movements to reduce consumption of alcohol, eliminate prostitution, improve prisons and insane asylums, improve education, and ban slavery. Religious revivalism, resulting from the Second Great Awakening, also had a large impact on American life in all parts of the country.

Third, the major political struggles during the antebellum period focused on states’ rights. Southern states were dominated by “states’ righters”—those who believed that the individual states should have the final say in matters of interpreting the Constitution. Inspired by the old Democratic-Republicans, John C. Calhoun argued in his “South Carolina Exposition and Protest” essay that the states had the right to nullify laws that they deemed unconstitutional because the states themselves had created the Constitution. Others, such as President Andrew Jackson and Chief Justice John Marshall, believed that the federal government had authority over the states. The debate came to a head in the Nullification Crisis of 1832–1833, which nearly touched off a civil war.

Fourth, and closely tied to the states’ rights issue, was the debate over slavery—the most divisive issue the nation had yet faced. Between 1820 and 1860, more and more northerners came to realize the horrors and injustices of slavery, while southerners grew increasingly reliant upon it to support their cotton-based economy. Northerners did not necessarily want social and political equality for blacks; they sought merely their emancipation. The debate in politics centered primarily on the westward expansion of slavery, which southern elites saw as vital to the survival of their aristocratic social and economic order. Others vehemently opposed the expansion of slavery outside the South. The debate was critical in the Missouri crisis, the annexation of Texas, and after the Mexican War.

Finally, the issue of westward expansion itself had a profound effect on American politics and society during the antebellum years. In the wake of the War of 1812, many nationalistic Americans believed that God intended for them to spread democracy and Protestantism across the entire continent. This idea of “manifest destiny” spurred over a million Americans to sell their homes in the East and set out on the treacherous Oregon, Mormon, Santa Fe, and California Trails. Policymakers capitalized on public sentiment to acquire Florida and Oregon and declared war on Mexico in 1846 to seize Texas, California, and everything in between.

Ultimately, these trends irreconcilably split the North from the South. The Market Revolution, wage labor, improved transportation, social reforms, and growing middle class of the North all clashed with the deep-seated, almost feudal social hierarchies of the South. Each successive debate on slavery and westward expansion drove the regions further apart until finally, in the 1850s, the North and the South were two wildly different places, culturally, socially, and economically.
